

expectation loves surprise

Discover the diverse career opportunities offered by the world's leading chemical company. www.basf.com/career

We are the world's leading chemical company because we offer intelligent solutions for our customers and for a sustainable future. We link and develop people with diverse talents all over the world. For you, this means a variety of ways to advance. Not only your performance but also your personality matter to us. At BASF, careers develop from opportunities.

BASF Plant Science develops plant biotechnology solutions to increase the yield and quality of crop plants. CropDesign, the Belgian division of BASF Plant Science, focuses on rice as model crop. The company applies genomics, informatics and robotics technologies and employs over 120 employees in state-of-the-art laboratories and an automated greenhouse complex. www.cropdesign.com

Working area:

Research & Development

Location:

CropDesign N.V., Zwijnaarde

Working hours:

Full-time

Contract Type:

Permanent

Statistician

What you can expect:

With the hiring of a statistician, CropDesign wants to complete its data-analysis team that is responsible for experimental design and data analysis in the field of agricultural crops. The data originate from laboratory, greenhouse and field experiments being part of a larger plant-screening program. The statistician will advise biologists or junior data analysts on experimental design and data analysis, or will carry out the analysis of more complex data sets, interpret results and report them to biologists.

What we expect:

You are expected to hold a Master's degree or higher in a relevant field (statistics, breeding, biotechnology) and to have relevant working experience in data analysis, especially with analysis of variance (e.g. via mixed models) and advanced regression techniques, preferably acquired in an agronomy, breeding or biotechnology environment. Your professional experience also includes the design of experiments, as well as computer programming (particularly in R) and databasing. You are willing to explore the applicability of non-familiar or novel statistical methodology, and are flexible in sharing workload with other team members. You demonstrate a keen interest in your field of expertise, and are fluent in English.

We offer:

Responsibility from day one in a challenging work environment and "on-the-job" training as part of a committed team.

Competitive compensation including attractive benefits as well as excellent career opportunities in an international company.

Expect to be surprised by the exciting range of career opportunities at BASF.
